DC-Gabion

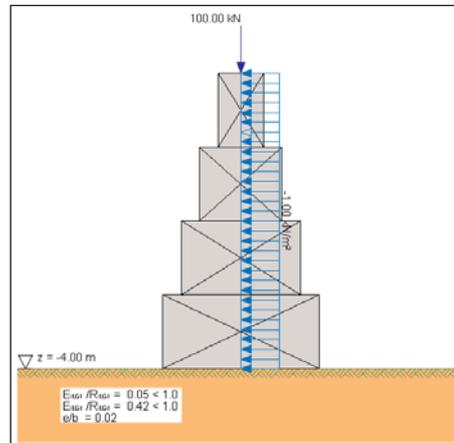

Analysis of gabions and supporting structures
acc. to the bulletin of the FGSV

news

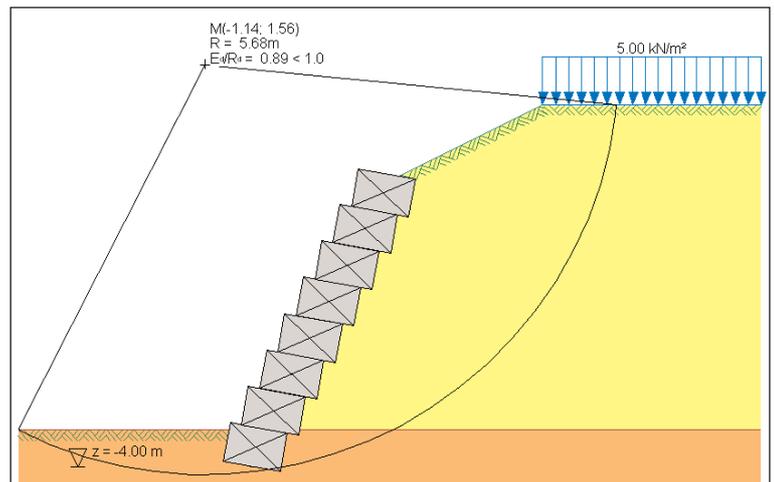

Display of the foundation engineering checks

- Gabions, concrete elements, layered blocks and concrete stack stones
- Different blocks sizes, inclined blocks, offsets and footing with base inclination
- All checks: Overturning, sliding, bearing capacity, slope stability, settlement
- Stability between the blocks: Overturning, sliding, check of the gabion wire
- Reinforced earth with geosynthetics with program DC-Geotex

Free-standing walls, e.g. noise protection

Inclined layered blocks with offsets
